

### **New Applicants who hold a current CCA Designation**

Up to six agrology credits (2-3 credit course equivalent value) will be allowed to count toward meeting the education entrance standard (required to gain Professional Agrologist [P.Ag.] title and registration permit to practice).

### **Request to Change/Add to Area of Practice**

Members registered to practice who do not have the formal education to support practice in crop management or related areas and who hold a current CCA designation and wish to practice in the area of Crop Science/Development/Agronomy will be granted recognition:

- A maximum of six Agrology credits (2-3 credit course equivalent value) will be allowed to count toward meeting the practice area requirements. Each institute will manage their oversight of practice areas and registration as guided by their respective institute registration protocols.

### **Continuing Competency**

Members who hold a current CCA designation may also use all related training toward meeting their continuing competency requirements in their respective province.

The new policy is consistent with legislation in the three provinces concerning the practice of Agrology and provides applicants and members with an important way to demonstrate and receive credit recognition for their qualifications. The policy demonstrates how well the CCA Program is related to the practice and regulation of Agrology and helps to clarify professional development and practice issues and opportunities for Agrologists.
